

Procedures facilitation.

In implementation of the Supreme Investment Council's directions concerning the facilitation of the investment's procedures, and eliminating bureaucracy, the General Authority for Investment and Free Zones has developed a plan to improve the business environment; the plan observes the principals of governance, transparency along with the adoption of the international standards, in accordance with the state's administrative reform plan and **"Egypt Vision 2030"**.

The Authority issued a decree to reduce 62% of the documents required by the companies to obtain the services related to the formation of the implementation status and the commencement of activity's committees; the committees are competent for the evaluation of the project's seriousness, and the verification of the investments inflow and the projects' operation, as a preparation to offer the companies the benefits and incentives of investing in Egypt.

Moreover, the Authority has facilitated several procedures by reducing the field examinations, as well as delegating the heads of the investors services centers in the governorates for the formation of the committees and approving their reports in implementation of the decentralization principal.

Our goal is to speed up the procedures; saving time and effort, and achieving decentralization.
